Aerospace-grade industry aluminum alloy material, electrostatic imported powder spraying on the surface, national patent, 20 years lifetime

### High-end football facilities with best 'aluminium'

Aluminum is one of the most widely used non-ferrous metal structural materials in industry. It has been widely used in aviation, aerospace, automobile, machinery manufacturing, shipbuilding and chemical industry. Aluminum alloy has the following performance characteristics:

- 1, high strength - aluminum alloy has low density and high strength, and its performance is close to or better than high quality steel;
- 2, convenience - the density of aluminum is 2.7g / cm<sup>3</sup>, about 1/3 of that of steel and copper, with great portability;
- 3, corrosion resistance - in most environments, including air, water (or salt water), petrochemical and other circumstances, aluminum has a good corrosion resistance;
- 4, recyclability - aluminum has a high recovery value, there is almost no difference between recycled aluminum and primary aluminium
